**Name** _____

# ADDITION FOR FRACTION WORKSHEET

**Solve the fraction problem and reduce the answer to simplest form:**

$\dfrac{2}{8} + \dfrac{5}{8} =$

$\dfrac{1}{9} + \dfrac{2}{9} =$

$\dfrac{4}{9} + \dfrac{4}{9} =$

$\dfrac{1}{14} + \dfrac{9}{14} =$

$\dfrac{9}{16} + \dfrac{2}{16} =$

$\dfrac{2}{15} + \dfrac{9}{15} =$

$\dfrac{5}{8} + \dfrac{2}{8} =$

$\dfrac{6}{14} + \dfrac{5}{14} =$

$\dfrac{1}{10} + \dfrac{2}{10} =$

$\dfrac{7}{9} + \dfrac{1}{9} =$

# ADDITION FOR FRACTION WORKSHEET

**Solve the fraction problem and reduce the answer to simplest form:**

$\frac{2}{8} + \frac{5}{8} = \frac{7}{8}$

$\frac{1}{9} + \frac{2}{9} = \frac{3}{9}$ → **Reduce by 3 to Simplest Form** → $\frac{1}{3}$

$\frac{4}{9} + \frac{4}{9} = \frac{8}{9}$

$\frac{1}{14} + \frac{9}{14} = \frac{10}{14}$ → **Reduce by 2 to Simplest Form** → $\frac{5}{7}$

$\frac{9}{16} + \frac{2}{16} = \frac{11}{16}$

$\frac{2}{15} + \frac{9}{15} = \frac{11}{15}$

$\frac{5}{8} + \frac{2}{8} = \frac{7}{8}$

$\frac{6}{14} + \frac{5}{14} = \frac{11}{14}$

$\frac{1}{10} + \frac{2}{10} = \frac{3}{10}$

$\frac{7}{9} + \frac{1}{9} = \frac{8}{9}$
