

Diamond Grit Size Designations, Approximate Particle Sizes, and Counts									
The diamond grit designations for diamond lapidary tools actually represent a range of diamond particle sizes used to facture that designation. For example a 150 grit diamond wheel is actually a 140/170 grit wheel made up of diamond crystals ranging in size from 105-88 microns or .004-.0036 inches in diameter. Inland lists grit size for all their diamond products by the standard US convention of labeling after the larger size diamond. For example, an Inland 60 grit diamond wheel is made from diamond grit size 60/ 80 range. If you are used to seeing a single number grit size, all you need to do is find the range which that grit falls into and then use the lower number of that range for the comparable Inland diamond product.									
USA Grit Size (mesh)	Inland Equivalent	Size - Microns (range or average mean)	Size - Inches (range or average)	Number Particles in One Carat (approx.)	Comparable to these Grits				
mesh is the number of wires per inch in a screen mesh	listed grit on Inland diamond products	1 micron = 3.93700787 × 10 ⁻⁰⁵ inches	1 inch = 25, 400 microns	1 carat = 0.2 grams 1 gram = 5 carats	commonly found grit sizes in lapidary wheels & drums
